

Invoice Automation Bot - Workflow Documentation

This document outlines the UiPath cloud-based invoice automation workflow developed using Gmail, OCR, and Google Sheets integration.

Workflow Structure

- Manual Trigger
- Create a new data table to store invoice information
- Add "InvoiceNumber" column to the data table
- Add "Amount" column to the data table
- Add "Date" column to the data table
- Get Email List from Gmail
- Download Email Attachments
- Loop through each file
- Check if file ends with .pdf
- Read PDF with OCR
- Extract Invoice Number
- Extract Amount
- Extract Invoice Date
- Log extracted data
- Add Data Row to Data Table
- Write Range to Google Sheets

Technologies Used

Technology	Purpose
UiPath Studio Web	Workflow automation
Gmail Integration	Retrieve invoice emails
OCR	Extract text from PDF invoices
Google Sheets	Store structured invoice data
Regex Extraction	Capture invoice number, amount, and date

Automation Benefits

- Reduces manual invoice entry
- Automates email attachment handling

- Processes invoices in the cloud
- Improves data accuracy
- Stores structured data automatically in Google Sheets
